HUB ASSEMBLIES 2012 CATALOG

PREMIUM HUB ASSEMBLY

Premium Hub Assemblies are Engineered for Performance utilizing a Unibody housing construction. One unit means no loose parts and more accurate clearance tolerance using CNC machines, and then robotically assembled. After assembly these units goes through a series of rigorous testing for heat, vibration, torque and friction using sophisticated machinery such as the (LGM-15/61). As a result, APEX Premium Hub Assemblies have less than 1% defective rate that carries a 50,000 mile warranty.

1. The flange uses precision grade steel that is 30% thicker for added strength and durability in today's driving conditions.
2. Enhanced sealing system utilizes high performance oil seals offering increased endurance between -40°F to 300°F.
3. High performance ESSO RONEX MP grease that reduces abrasion and better than OEM lubricant.
4. Superior Coated ABS sensor that has a temperature range between -76°F and 302°F; and avoids cracking and shortages.
5. Specially heat treated with a "Gold" Finish to fight off the road elements and prevent rust.

STANDARD HUB ASSEMBLY

APEX's Hub Bearings feature high quality metal roller balls with added rollers over OE requirements to create a final product that is capable of bearing loads 20% to 30% more than other brands. All APEX Hub Bearings comes standard with flanges that are 30% thicker than traditional units offering superior performance.

Through rigorous and extreme condition testing, APEX Hub Bearings are refined to ensure a superior life span. As a result, these hub bearings boast a less than 2% defective rate and has a 20,000 mile warranty.

1. The ABS Sensor cable is constructed of nitrile butadiene rubber capable of handling temperatures from -40°F to 225°F.
2. Utilizing superior seals to provide optimal performance between -30°F to 300°F.
3. Specially heat treated 65MN steel for strength and durability..

Manufacturing Quality

Our Hub Bearings are manufactured by HZF, our exclusive manufacturing partner under the strictest quality guidelines. HZF is today certified under the following International Procedures and maintain certificates for ISO9002, QS9000 and TS16949. Using these manufacturing processes and standards, we test our Hub Bearings to rigorous and extreme conditions ensuring their superior life span. Our testing is conducted using a mud/brine mixture yet are able to produce products with less than less than 0.3% defective rate - after assembly. We are able to simulated different operating conditions by adding radial loads with rising temperatures, testing both friction and torque capabilities, ensure continued heavy duty performance at its highest level of quality endurance utilizing sophisticated equipment such as the auto bearing testing machine the (LGM-15/60). We conduct additional vibration tests, using VSR-1 bearing vibration signal recorder to ensure product stability at various vibration frequencies.

Material Quality and Product Superiority

- Improved seal performance, upgraded lubricating grease, and sensor materials, including fluororubber material which is 20 times stronger than commonly used acrylonitrile-butadiene rubber to maintain a quality stable signal when operating between -60°C to 150°C.
- APEX Hub Bearing boasts isolated heat treatment on the weaker spots to ensure greater strength of the whole unit.
- We increased our flange thickness; the unit strength increased 30% over traditional designed unit.
- APEX's Premium Product Line offers a gold top-coat layer on lock nuts, bolts, and surfaces to reduce rust and corrosion extending the life on premium line products.
- APEX only uses high quality metal roller balls, adding additional rollers to create a final product that will bear loads 20% to 30% more than other brands.

How to use this catalog

1. Locate the desired **MAKE** and **MODEL** of a vehicle.
2. Select the specific application (i.e. **WHEEL, AXLE, CLUTCH, TRANSMISSION**, etc.)
3. Refer to **YEAR** and **MODEL** information to identify the correct bearings, oil seals and kits for a specific vehicle.
4. Additional information relating to specific bearings, oil seals and kits listed directly to the left of the part number.
5. Optional, High Temperature, Thrust and Heavy Duty versions of certain bearings and oil seals are listed directly below the standard part for that applicaiton.
5. Explanations for footnotes used in this catalog are found at the bottom of each page.
